I-Novelty:

Claim 1 of the present invention is concerned with a dental tray comprising tray main body with a protrusion and a bridging recess, connection segment made of transparent synthetic resin with a bridging groove and a bridging recess. Although D1 cited in the international search report discloses impression tray device with removable segments for dental implant transfers, the presence of a protrusion and a bridging recess that are formed at a predetermined interval along the both side walls and the opened portion. And also, D2-D4 cited in the international search report do not refer to the connection segment having a bridging groove and a bridging recess formed on the both connection portions. II-Inventive step:

1) Concerning claim 1 (Independent claim)

The references D1-D4 do not disclose a dental tray comprising tray main body with a protrusion and a bridging recess, connection segment made of transparent synthetic resin with a bridging groove and a bridging recess. In addition, it is not obvious from the references D1-D4 by the skilled person in the art. Consequently, there is no suggestion in any of the references, either alone or in combination, which would lead to the solution posed by the present invention. Therefore, claim 1 of the present invention meets the criteria set out in PCT Article 33(3).

Claim 1 meets the criteria set out in PCT Article 33(4), because it is directed to an industrially applicable dental tray.
